1. Introduction

This document provides an overview of call-back API process flow. Using the Callback API the merchant in which NTT Data payment services system posts transaction response info, without initiating any API request. It is only triggered when the transaction is successful or failed. This information is posted **server-to-server** using **POST** method, in name value pair format on merchant's URL configured in NDPS system.

2. General process flow:

The general process flow of the call-back API is as follows:

- The end customer after purchasing product/service on merchant websites opts for payment, he either gets redirected to NTT Data payment service page or requested through API in case of seamless request.
- The user selects his choice payment option and provides credentials for authorization.
- Once the authorization is completed the transaction is executed. For a transaction to be successfully executed, the IP and domain URL need to be whitelisted and configured.
- Once the end user completes transaction successfully and if callback URL is configured for that merchant, then the response will be posted on return URL as well as callback URL in both scenarios' success/failure.

3. Pre-requisite:

Merchant's IP and domain URL need to be whitelisted and configured at NTT data payment system and also NTT data payment server also needs to be whitelisted at their end.

4. Callback posting parameters:

Parent Object	Object	Parameter Name	Data Type & Max Length	Conditional/ Optional/ Mandatory	Sample Value	Content/ Remarks
merchDetails		merchId	number(10)	Mandatory	8952	Unique ID assign by NDPS to merchant
		merchTxnId	string(50)	Mandatory	"1234567890"	Unique transaction ID provided by merchant system
		merchTxnDate	datetime (19)	Mandatory	"2023-07-13 20:46:00"	Transaction date must be in yyyy-MM-dd HH:mm:ss format
payDetails		amount	number (12,2)	Mandatory	10.00	Total Transaction Amount (10 digits prior to decimal and 2 decimal)
		atomTxnId	number(25)	Mandatory	2123321212112	Max limit is of 25 digits
		surchargeAmount	number (12,2)	Optional	0.00	surcharge amount(10 digits prior to decimal and 2 decimal)
	prodDetails []	prodName	string (50)	Mandatory	NSE	Product Name
		prodAmount	number (12,2)	Optional	10.00	Product wise amount division as provided by merchant(10 digits prior to decimal and 2 decimal)
		totalAmount	number (12,2)	Mandatory	10.00	Total amount [amount + surcharge amount] (10 digits prior to decimal and 2 decimal)
		custAccNo	string(45)	Optional	"100000036600"	Customer account number

		clientCode	string(45)	Mandatory	"12345"	As provided by merchant
		txnInitDate	datetime(19)	Mandatory	"2023-07-13 20:46:00"	Transaction Initiation Date(yyyy-MM-dd HH:mm:ss)
		txnCompleteDate	datetime(19)	Conditional	"2023-07-13 20:46:00"	Transaction Completion Date for all successful txn(yyyy-MM-dd HH:mm:ss)
payModeSpecificData	bankDetails	subchannel	string(40)	Mandatory	"BQ"	Sub Channel (Payment Product will be displayed here)
		otsBankId	string (10)	Conditional- Only in case of Netbanking	"2"	Refer NB Bank List for possible values. Only applicable for NB, else null
		otsBankName	string(60)	Mandatory	"HDFC Bank"	Bank Name
	cardDetails	bankTxnId	string(30)	Mandatory	"UbiBgQp3Dwri0S347rg"	Bank Txn ID
		cardType	string(20)	Conditional- Only in case of card transaction and UPI	"VISA"	Card Type will be presented for card transactions, else null
		cardMaskNumber	string(20)	Conditional- Only in case of card transaction and UPI	"XXXXXXXXXXXX0465"	Mask Card Number will be presented card transactions, else null
responseDetails		statusCode	string(30)	Mandatory	"OTS0000"	Refer response codes
		message	string (30)	Optional	"SUCCESS"	Message for Status Code
		description	string(50)	Optional	"TRANSACTION IS SUCCESSFUL"	Status Description

5. Flow of call-back API:

Call-back API- Non-Challan transactions

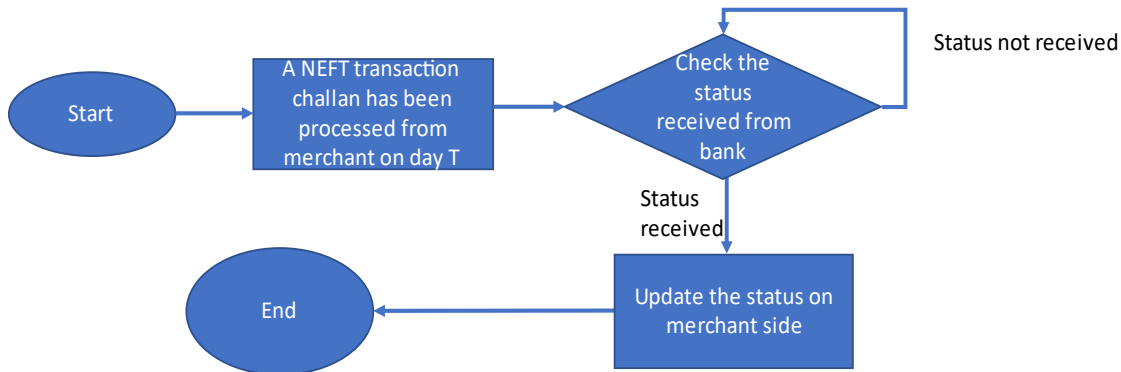

- 1 NTT receives payment request from merchant of the transaction carried out by end customer
- 2 NTT DPS forwards this request to bank
- 3 NTT receives response from the bank of the transaction being successful/failed till T, T+1, T+2
- 4 NTT posts the transaction at merchant's server through callback API

Call-back API- Non-Challan transactions after T+2 days

- 1 NTT receives payment request from merchant of the transaction carried out by end customer
- 2 NTT DPS forwards this request to bank
- 3 NTT receives response from the bank of the transaction being successful/failed after T+2 days
- 4 NTT posts the transaction at merchant's server through callback API as forced failed autoreverse the transaction to pay the end user.

Call-back API- Challan transactions

6. Sample response format:

Currently, the response is sent in JSON format to the merchant server. The response is posted in JSON format.

Sample Encrypted Request Data:

The encrypted form of the sample response which will be received by merchant will be as follows -

```

encData=F5140AF9DC1B3DB7AFA300D9675EE72AFE09D27235E356AFAC21032BB1703A7EF4E8784726

      }
    }
  },
}
```

```
"responseDetails":{
  "statusCode":"OTS0000",
  "message":"SUCCESS",
  "description":"SUCCESS"
}
}
```

Scenario 1-

If a transaction gets successful at NDPS' end, on real time NDPS will post "**message = SUCCESS**" response to merchant's Callback URL.

Scenario 2-

If on T-day, the transaction is pending at NDPS end, after bank re-query response on same day if transaction is success at bank's end then status will be changed from pending to success at NDPS' end, then NDPS will post "**message =SUCCESS**" response to merchant's Callback URL.

Scenario 3-

If on T-day, the transaction is pending at NDPS end, on T+1-day post reconciliation if transaction is success, then status gets changed from **pending** to **success** at NDPS' end, then NDPS will post "**message =SUCCESS**" (Force success) response to merchant's Callback URL. If it's Failed response will be "**message =FAILED**".

Scenario-4-

If on T-day, the transaction is getting failed at NDPS' end, on real time NDPS will post "**message =FAILED**" response to merchant's Callback URL.

Scenario-5-

Until and unless we are not getting response (Success/Failed) from bank end, NDPS will not trigger Callback API. Till T+2 if we're not getting response from Bank, NDPS system will mark transaction as Fail, but Callback will not be triggered. If transaction status is received as success from Bank's end after T+2, irrespective to the configuration [Force Success/Auto Reversal] in NDPS system, same will be marked as Auto Reversal.

Scenario-6-

For **NEFT** Transactions Challan Generated on T-day, in real time status will be posted on Merchant Return URL as 'Pending' with description 'Challan generated successfully'.

Once end-customer makes the payment to the respective bank via challan, then the transaction status gets changed from '**challan generated**' to '**Success**' at NDPS end, then NDPS will post "**message=SUCCESS**" response to merchant's Callback URL.

7.Response codes

Error Code	Message	Description
OTS0000	SUCCESS	TRANSACTION IS SUCCESSFUL
OTS0600	FAILED	TRANSACTION IS FAILED

8.Decryption of data

The data received by the merchant from NTT Data payment server will be in encrypted format using **AES 512**. To receive the data in JSON format, the data will have to be decrypted using response encryption credentials.

The sample key for UAT is -

MerchId	encResKey
9135	7813E3E5E93548B096675AC27FE2C850

Parameter Name	Mandatory	Data Type & Max Length	Sample Value	Content/ Remarks
encResKey	Mandatory	String(32)	7813E3E5E93548B096675AC27FE2C850	Need to be saved per MID as shared by NDPS

Java code for decryption :

```
import java.util.logging.Logger;
import javax.crypto.Cipher;
import javax.crypto.SecretKey;
import javax.crypto.SecretKeyFactory;
import javax.crypto.spec.IvParameterSpec;
import javax.crypto.spec.PBEKeySpec;
import javax.crypto.spec.SecretKeySpec;

```

UAT environment details:

The UAT environment details are as follows:

13.127.25.237

The above is the IP address of the UAT server for callback scenarios.

UAT Server: The NDPS UAT server/ IP/ domain needs to be whitelisted at the merchant's end so that we can post on the merchant side.

Also, Merchant callback URL will have to be whitelisted at NDPS to enable two-way API communication.
